WHIRLPOOL CHALLENGE

FINAL PRESENTATION

DATA ANALYTICS AND ARTIFICIAL INTELLIGENCE TOOLS II
(GROUP 101)

MADE BY:

Ramón Islas / A00833282

Eugenio Solis Lozano / A01722733

Federico Viramontes Elizondo / A01722772

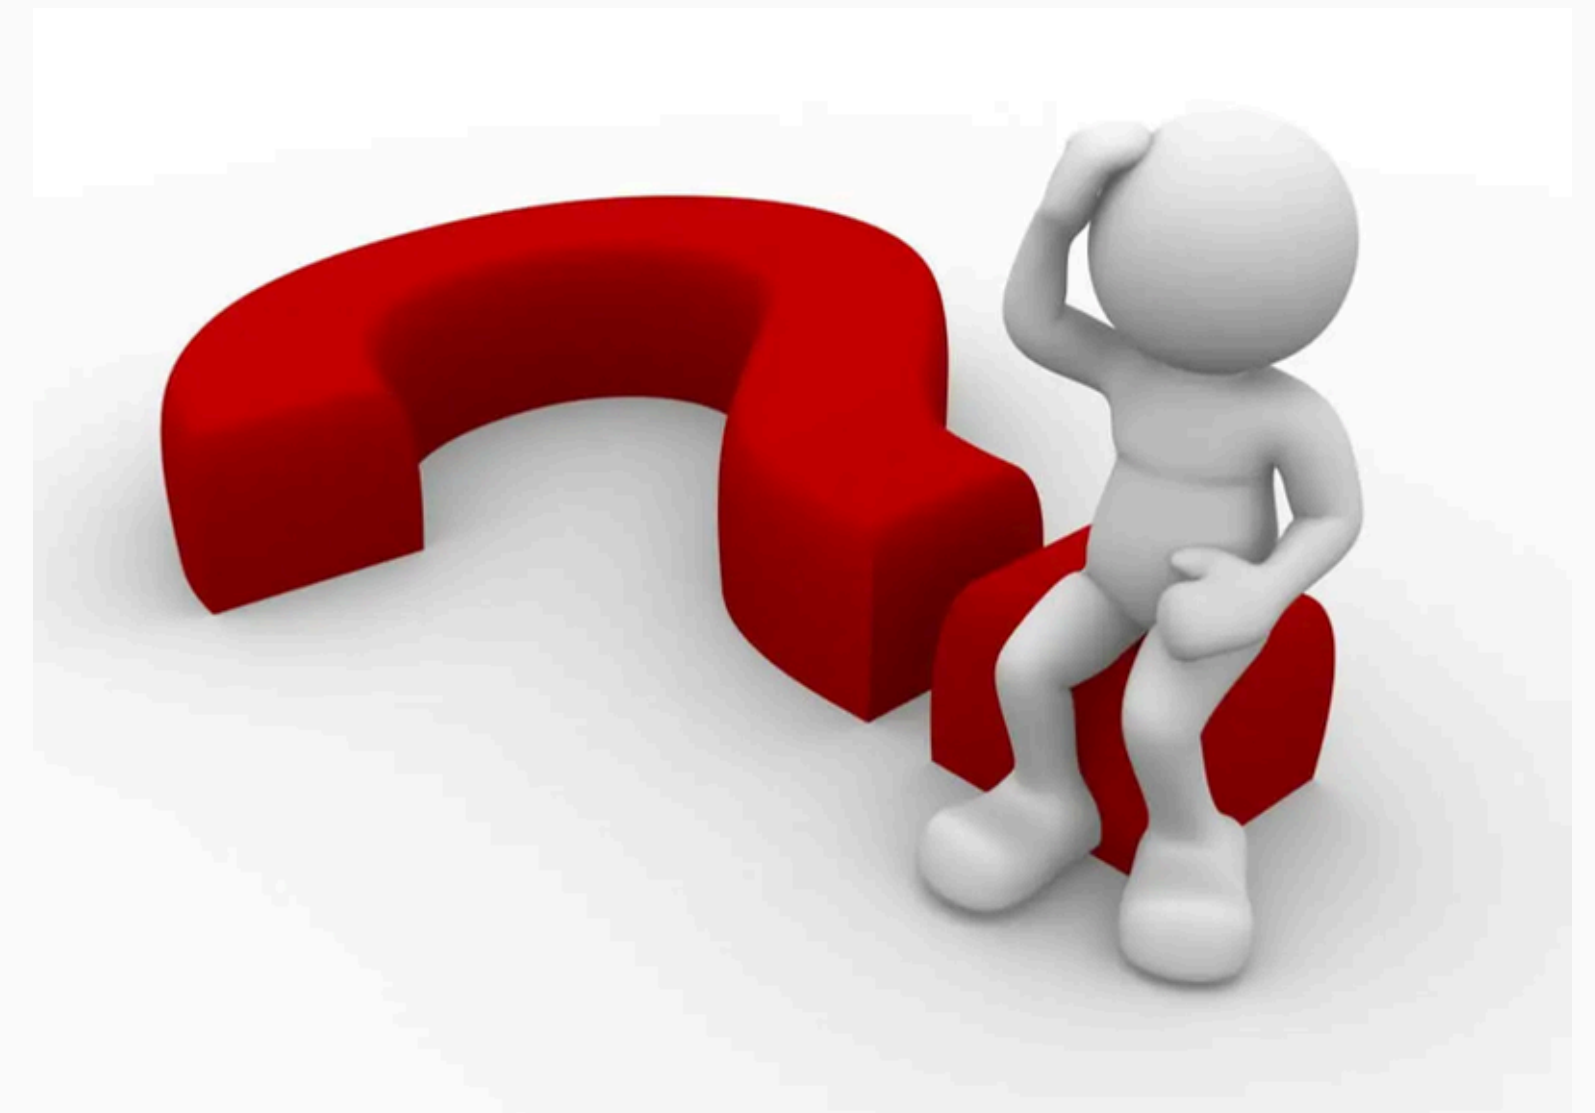

Challenge objective

“Identify the optimal price to maximize the balance between DCM and Sell Out.”

Problem Context (Why this project?)

- Whirlpool manages many SKUs across different trading partners and segments.
- Price changes affect sales differently depending on the segment.
- It's difficult to compare everything manually or understand patterns quickly.
- The company needs a clear way to analyze sales, margins, and price behavior.

Objectives of the Dashboard

The dashboard was designed to help Whirlpool:

- Identify top-performing SKUs, segments and TPs.
- Understand how quantity changes over time.
- Predict next week's sales using historical data.
- Explore price sensitivity and find better price opportunities.

Data Used

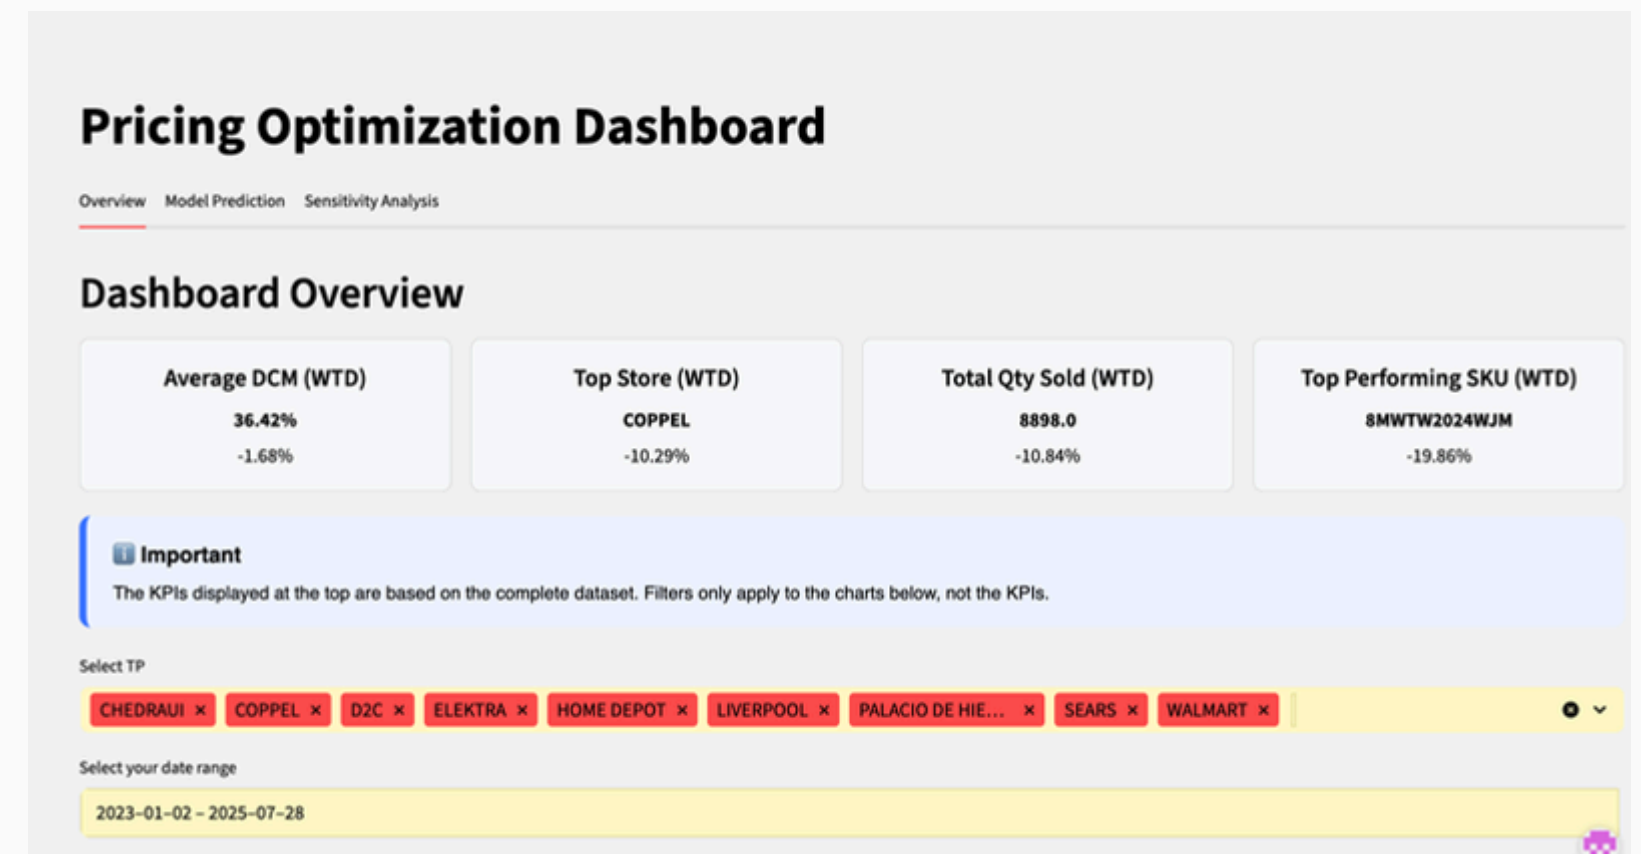

- Sales, prices, DCM, quantity, and segment information.
- Covers multiple years and multiple trading partners.
- Cleaned and organized to allow consistent analysis.

What You Will See in the Dashboard

The dashboard is divided into three main parts:

1. Overview: sales, margin, top SKUs, segment performance, and trends.
2. Prediction: model that estimates next week's quantity.
3. Sensitivity Analysis: elasticity and optimal price for each segment.
